### Non-liquefied inert gases Extinguishing systems

#### CEA 4008 -2019

**Uniquement disponible  
en anglais**

#### CEA 4008 - FIRE EXTINGUISHING SYSTEMS USING NON-LIQUEFIED INERT GASES

#### Guidelines for Fire Extinguishing Systems - Planning and Installation

These Guidelines give the requirements for planning, installation, and maintenance of stationary fire extinguishing systems using non-liquefied inert gas when used for the protection of buildings and industrial manufacturing plants and as an extension or modification of existing systems.

These guidelines specify the requirements for a selection of particular extinguishing gases, which are stored and discharged as gas, and include not only requirements for the extinguishing system itself and associated components, but also requirements for buildings and objects to be protected. These Guidelines are in accordance with the current state of the art.

This non-binding standard has been developed by prevention bodies, under the initiative of the insurers or their representatives grouped at European level in the Insurance Europe Prevention Forum.

ANPI asbl, Belgium - CEPREVEN, Spain - CNPP, France  
DBI, Denmark -  
FPA, United Kingdom – VdS, Germany.
